

AutoVity – Activity Bank Capacity & 2-Month Gap Analysis

Comprehensive breakdown of session requirements, current repository inventory, and expansion targets.

Key Target: 40 school days × 4 activities/day = **160 total activity plays** (or 40 daily sets of 3–4 activities).

1. Calculation & Time Requirements

- **Duration:** 2 Months = 8 Weeks (~40 school days at 5 days/week)
- **Daily App Usage:** 15 to 20 minutes per day
- **Session Pacing:** 15-minute global timer in SetManager (900s) • 1 standard set = 3 activities
- **Activity Speed:** ~2 to 4 minutes per activity (including audio prompts, hints, and retries)
- **Daily Output:** 1 to 2 sets per day (~4 individual activities/day)
- **Spaced Repetition Note:** Students with ASD learn best through structured rotation tiers (Foundation → Guided Practice → Mastery). A bank of ~150–160 content variations covers 8 weeks without cognitive fatigue.

2. Current Activity Bank Inventory (~104 Items)

Activity Module	Current Bank Content	Total	Status
